Chapter 1 Introduction

1.1 Features and specifications

iSVxxx integrated servo motor is a 57mm frame size brushless motor integrated with a 16bit encoder and a servo drive. At very compact size and with all components integrated, the iSVxxx can save mounting space, eliminate encoder connection & motor wiring time, reduce interference, and cut/reduce cable and labor costs.

Integrated compact size for saving mounting space & setup time, and reducing electrical interference.

- Step & direction command input for position control
- Compatible mounting size with stepper motor
- Smooth motor movement and excellent respond time
- Isolated control inputs of Pulse, Direction
- In-position and fault outputs to external motion controllers for complete system controls
- Over voltage, over-current, and position-error protection

Electrical Specifications

| Parameter | Min | Typical | Max | Unit |
|-----------------------|-----|---------|-------|------|
| Input Voltage | 20 | 36 | 50 | VDC |
| Continuous Current | 0 | - | 6.0 | А |
| Pulse Input Frequency | 0 | - | 0-300 | kHz |
| Pulse Voltage | 0 | 5 | 24 | V |
| Logic Signal Current | 7 | 10 | 16 | mA |
| Isolation Resistance | 100 | - | - | MΩ |

Note : The max pulse frequency is software configurable

Operating Environment

| Cooling | Natural Cooling or Forced cooling | | | |
|---------------------|-----------------------------------|--|--|--|
| | Environment | Avoid dust, oil fog and corrosive gases | | |
| Operating | Ambient Temperature | 0° C $- 40^{\circ}$ C (32 $^{\circ}$ F $- 104^{\circ}$ F) | | |
| Environment | Humidity | 40%RH — 90%RH | | |
| | Operating Temperature (Heat Sink) | 70°С (158°Ғ) Мах | | |
| Storage Temperature | -20°C — 65°C (-4°F — 149 | °F) | | |

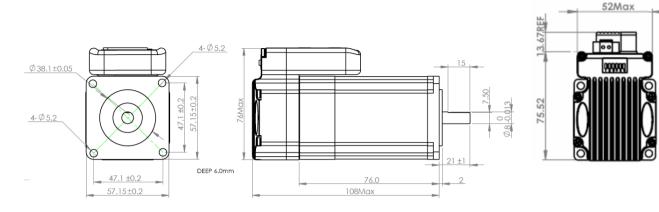

Motor Specifications

| Part Number | ISV57T-090 | ISV57T-130 | ISV57T-180 |
|--------------------|------------|------------|------------|
| Rated Power(W) | 90 | 130 | 180 |
| Rated Torque(Nm) | 0.30 | 0.45 | 0.6 |
| Peak Torque (Nm) | 0.90 | 1.1 | 1.5 |
| Rated Speed(rpm) | 3000 | 3000 | 3000 |
| Peak Speed(rpm) | 4000 | 4000 | 4000 |
| Rated Voltage(Vdc) | 36 | 36 | 36 |
| Weight(kg) | 0.95 | 1.25 | 1.54 |

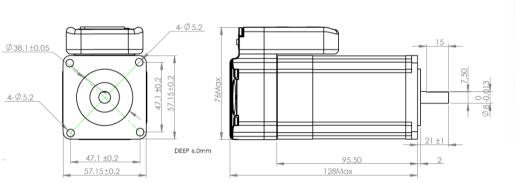

Applications

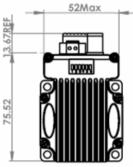

iSVxxx can be used in various applications such as laser cutters, laser markers, high precision X-Y tables, labeling machines, CNC router, etc. Its unique features make the iSVxxx an ideal choice for applications that require both low-speed smoothness and small mounting space.

1.2 Mechanical Specifications

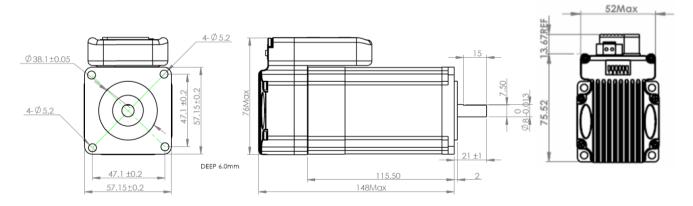

Mechanical Specification of ISV57T-090

Mechanical Specification of ISV57T-130

Mechanical Specification of ISV57T-180

Chapter 2 Conection

2.1 Connectors and Pin Assignment

iSVxxx has three connectors, a connector for control signals connections, a connector for RS232 communication connection, and a connector for power connections.

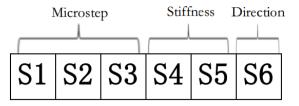

| | Control Signal Connector | | | | | | | |
|-----|--------------------------|-----|--|---|--|--|--|--|
| Pin | Name | I/O | Description | | | | | |
| 1 | PUL+ | I | <u>Pulse Signal</u> : In single pulse (pulse/direction) mode, this input represents pulse signal, active at each rising or falling edge (Software configurable). In double pulse mode (software configurable), this input | The function of formation | | | | |
| 2 | PUL- | I | represents clockwise (CW) pulse, active both at each high level and low level. 4.5-24V for PUL-HIGH, 0-0.5V for PUL-LOW. For reliable response, pulse width should be longer than 2.5µs for 200K MAX input frequency or 1µs for 500K MAX input frequency. | The fuction of four pins will be different if ISV motor works in internal velocity mode. | | | | |
| 3 | DIR+ | I | <u>Direction Signal</u> : In single-pulse mode, this signal has low/high voltage levels, representing two directions of motor rotation. In double-pulse mode (software configurable), this signal is counter-clock (CCW) pulse, | Pls refer to chapter 3 and chapter 4 about how to use these four | | | | |
| 4 | DIR- | I | active both at high level and low level. For reliable motion response, DIR signal should be ahead of PUL signal by 5µs at least. 4.5-24V for DIR-HIGH, 0-0.5V for DIR-LOW. Toggle DIP switch SW5 to reverse motion direction. | pins for velocity mode . | | | | |
| 5 | ALM+ | 0 | <u>Alarm Signal</u> : OC output signal, activated when one of the following protection is activated: over-voltage and over current error. They can sink or source MAX 50mA current at 24V. By default, the impedance | | | | | |
| 6 | 6 ALM- O | | between ALM+ and ALM- is low for normal operation and becomes high when any protection is activated. The active impedance of alarm signal is software configurable. | | | | | |

Power Connector

| Pin | Name | I/O | Description |
|-----|------|-----|---|
| 1 | +Vdc | I | Power Supply Input (Positive) 24-36VDC recommended. Please leave reasonable reservation for voltage fluctuation and back-EMF during deceleration. |
| 2 | GND | GND | Power Ground (Negative) |

| | RS232 Communication Connector | | | | | | | |
|-----|-------------------------------|-----|--|--|--|--|--|--|
| Pin | Pin Name I/O Description | | | | | | | |
| 1 | +5V | 0 | +5V power output (Note: Do not connect it to PC's serial port) | | | | | |
| 2 | TxD | 0 | RS232 transmit. | | | | | |
| 3 | GND | GND | Ground. | | | | | |
| 4 | RxD | | RS232 receive. | | | | | |
| 5 | NC | - | Not connected. | | | | | |

2.2 DIP Switch Settings

. Pulses/Rev (S1-S3)

| Pulse/rev | S1 | S2 | S3 |
|-----------|-----|-----|-----|
| Pr0.08 | Off | Off | Off |
| 1600 | On | Off | Off |
| 2000 | Off | On | Off |
| 3200 | On | On | Off |
| 4000 | Off | Off | On |
| 5000 | On | Off | On |
| 6400 | Off | On | On |
| 8000 | On | On | On |

Stiffness setting(S4—S5)

| Stiffness | S4 | S5 |
|-----------|-----|-----|
| Pr0.03 | Off | Off |
| 72 | On | Off |
| 71 | Off | On |
| 70 | On | On |

Motor Shaft Direction (S6)

DIP switch S6 is used for changing motor shaft rotation direction. Changing position from "ON" to "OFF", or "OFF" to "ON" will reverse iSVxxx rotation direction.

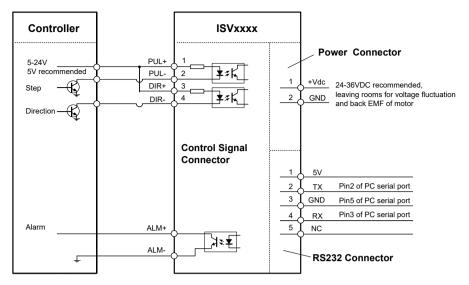

| S6 | Direction |
|-----------|-----------|
| Off | CCW |
| On | CW |

2.3 RS232 Communication Cable Connections

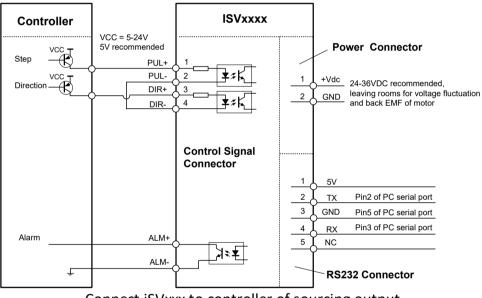

Note1: The RS232 communication port is not isolated. Please use an isolated power supply for the ISVxxx when the PC's serial port is not isolated.

Note2: Do not plug or unplug the connector when power is on.

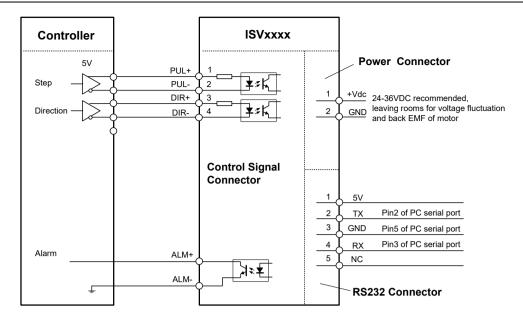

2.4 Typical Connections

Connect iSVxxx to controller of sinking output

Connect iSVxxx to controller of sourcing output

Connect iSVxxx to controller of differential output

Chapter 3 Parameter

3.1 Parameter List

| Num | Name | Range | Default | Unit |
|--------|--|--------------|---------|-----------|
| Pr0.01 | Control mode setup | 20~21 | 20 | |
| Pr0.02 | Real-time auto-gain tuning | 0~2 | 1 | |
| Pr0.03 | Selection of machine stiffness at real-time auto-gain tuning | 50~81 | 70 | |
| Pr0.04 | Inertia ratio | 0~10000 | 300 | % |
| Pr0.06 | Command pulse rotational direction setup | 0~ 1 | 0 | |
| Pr0.08 | Command pulse input mode setup | 0~ 32767 | 4096 | Pulse |
| Pr0.13 | 1st torque limit | 0~ 500 | 300 | |
| Pr0.14 | Position deviation excess setup | 0~ 500 | 200 | 0.1rev |
| Pr0.20 | Test result of inertia ratio | 0~ 32767 | 0 | % |
| Pr1.00 | 1st gain of position loop | 0~ 30000 | 320 | 0.1/s |
| Pr1.01 | 1st gain of velocity loop | 1~ 32767 | 180 | 0.1Hz |
| Pr1.02 | 1st time constant of velocity loop integration | 1~ 10000 | 310 | 0.1ms |
| Pr1.03 | 1st filter of velocity detection | 0~ 10000 | 15 | |
| Pr1.10 | Velocity feed forward gain | 0~ 1000 | 300 | 0.10% |
| Pr1.11 | Velocity feed forward filter | 0~ 6400 | 50 | 0.01ms |
| Pr1.37 | Register for special function | 0~ 1 | 0 | |
| Pr2.22 | positional command smoothing filter | 0~ 32767 | 0 | 0.1ms |
| Pr3.03 | Speed command reversal input | 0~ 1 | 0 | |
| Pr3.04 | 1st speed setup | -5000 ~ 5000 | 0 | r/min |
| Pr3.05 | 2nd speed setup | -5000 ~ 5000 | 0 | r/min |
| Pr3.06 | 3rd speed setup | -5000 ~ 5000 | 0 | r/min |
| Pr3.07 | 4th speed setup | -5000 ~ 5000 | 0 | r/min |
| Pr3.12 | time setup acceleration | 0~ 10000 | 100 | ms/(Krpm) |
| Pr3.13 | time setup deceleration | 0~ 10000 | 100 | ms/(Krpm) |
| Pr3.24 | maximum speed of motor rotation | 0~ 5000 | 0 | r/min |
| Pr4.06 | input selection SI7 | 0~ 16777215 | 1200 | |
| Pr4.07 | input selection SI8 | 0~ 16777215 | 0E00 | |
| Pr4.08 | input selection SI9 | 0~ 16777215 | 8383 | |
| Pr4.10 | output selection SO1 | 0~ 16777215 | 1111H | |
| Pr4.31 | Positioning complete range | 0~ 10000 | 10 | Pulse |
| Pr4.35 | Velocity coincidence range | 10~ 2000 | 50 | r/min |
| Pr4.36 | At-speed | 10~ 2000 | 1000 | r/min |
| Pr5.13 | Over-speed level setup | 0~ 5000 | 0 | r/min |
| Pr5.20 | Position setup unit select | 0~2 | 0 | |

3.2 Parameter function

3.2.1 Basic Setting

| P | Pr0.01* Control Mode Setup | | Range | unit | default | | ated ol mode | | |
|---|----------------------------|-----|----------|---------|---------|----|-----------------|---|--|
| | Control Mode Setup | | | 20 - 21 | - | 20 | Р | S | |
| | | | | | | | | | |
| | Setup va | lue | st mode | | | | | | |
| | 20 | | Position | | | | | | |
| | 21 | | Velocity | | | | | | |

| Pr0.02 | Rea | al-time Aut | o-gain Tuning | Range | unit | default | | ated ol mode |
|-----------|--|-------------|---------------------------------|--------|------|---------|---|-----------------|
| 110.02 | net | | e gan ranng | 0 -2 | - | 1 | Р | S |
| | | | de of the real-time auto-gain t | | | | | |
| Setup val | ue | mode | Varying degree of load inertia | | | | | |
| 0 | | invalid | Real-time auto-gain tuning func | | | | | |
| 1 | 1 standard Basic mode. do not use unbalanced load, friction compensation or gain switching, mainly used for interpolation movement . | | | | | | | |
| 2 | Main application is positioning. it is recommended to use this mode on | | | | | | | |
| | Caution: If pr0.02=1 or 2 , you can't modify the values of pr1.01 – pr1.13, the values of them depend on the real-time auto-gain tuning ,all of them are set by the driver itself. | | | | | | | |
| Pr0.03 | | | nachine stiffness at real | Range | unit | default | | ated ol mode |
| 110100 | tim | e auto gair | ituning | 50 -81 | - | 70 | Р | S |
| | Pr0.03 selection of machine stimpess at real kange unit default control mode | | | | | | | |
| However, | Notice: Higher the setup value, higher the velocity response and servo stiffness will be obtained. However, when increasing the value, check the resulting operation to avoid oscillation or vibration. Control gain is updated while the motor is stopped. | | | | | | | |

For ISV motor , stiffness can be set with switch with SW4,SW5, any change from the SW4,5 will be available after restarting power

| Pr0.04 | Inertia ratio | Range | unit | default | | ated ol mode | | | |
|--|--|--------------|--------|-------------|------|-----------------|--|--|--|
| 110.04 | | | % | 300 | Р | S | | | |
| You can set up the ratio of the load inertia against the rotor(of the motor)inertia. | | | | | | | | | |
| Pr0.04=(load inertia/rotate inertia)×100% | | | | | | | | | |
| Notice: | | | | | | | | | |
| inertia rat becomes | tia ratio is correctly set, the setup unit of Pr1.01 s tio of Pr0.04 is larger than the actual value, the se larger, and when the inertia ratio of Pr0.04 is sma ocity loop gain becomes smaller. | etup unit of | the ve | locity loop | gain | | | | |

Chapter 5 Run

5.1 Inspection Before trial Run

| No | ltem | Content |
|----|------------------------------|---|
| 1 | Inspection on wiring | Power cable , tuning cable , signal cable |
| 2 | Confirmation of power supply | The voltage between Vdc and Gnd is no more than 36Vdc . |
| 3 | Fixing of position | Motor installation |
| 4 | Inspection without load | Motor shaft doesn't connect the load |

5.2 Run

ISV**** can work in both position mode and internal velocity mode .

5.2.1 Position control

connection

| Port | Default |
|-----------|------------------------|
| +Vdc | +24V~+36Vdc |
| GND | Power GND |
| PUL+/PUL- | Pulse input signal |
| DIR+/DIR- | Direction input signal |
| ALM+/ALM- | Alm output signal |
| SW1 | Microstep setting |
| SW2 | Microstep setting |
| SW3 | Microstep setting |
| SW4 | Stiffness selection 1 |
| SW5 | Stiffness selection 2 |
| SW6 | Running direction |

Steps:

Connect the motor with tuning cable (CABLE-PC-i)

a) How to find the ratio of inertia for one axis

It is very important to find ratio of inertia for one axis in order to make best performance before setting other parameter (for example, setting PID of position loop or velocity loop).

Here below is step to find ratio.

Connect motor with load if you need to test one axis.

Do make the axis can be moved in safe distance, any interference should be avoided to ensure safety and accuracy of testing .

- 1.1 set the driver working in position loop (pr0.01=20).
- 1.2 click "run test" , then set the following value below :

| VelocityFeedforwardGain 300 TorqueFeedforwardGain 150 ControlSwitchingMode 10 RatioOfInertia(X) 200 TorqueFeedforwardGain | |
| RealtimeAutonaticAdjustmentMode Locate 💌 RealtimeAutonaticAdjustmentRigid 10 💌 | |
| Speed Traperoidal Parameters Start | |
| Velocity(rpm) 1500 AccelerationAndDecelerationTime(ms/Krpm) 100 IntervalTime(ms) 400 | |
| | start button will start. |

Set RealtimeAutomaticAdjustmentMode as Manual,

And set Real timeAutomaticAdjustmentRigid as 70 or 71.

Then set: Velocity = 1500 rpm, acceleration = 100, interval time = 1000,

distance = 500 (0.1 rev) Repeat time = 3, RunningMode: Positive and negative

Check the value of Pr020, then minus 100, the result means the value of pr004.

For example.

Check the value of Pr020, if the value is 500, then pr004 =400, it means the ratio of inertia equals 4. (If you can't find the pr020, refer to appendix "How to find the hidden parameter")

b) Set electric ratio

Pr008 can be set for counts per rev if SW1 and SW2 are both OFF. Or change the status of SW1 and SW2 to change the counts per rev.

c) set running direction

Both SW6 and Pr006 can be used to set direction of running .

d) download and save the new value , and restart the power to make values available .

5.2.2 Internal speed control

| Port | | |
|-----------|----------------------|-------------|
| +Vdc | 24-50 Vdc | |
| GND | Power gnd | |

| SW4 | Stiffness selection1 | |
| SW5 | Stiffness selection2 | |

- a) set pr003 and pr004 in position mode (pr001=20)
- b) set pr001=21, set pr407 and pr406 as 8E00 and 8F00
- set the velocity value : set pr304=0 ,pr305=1000 , set pr306= -500 , pr307= 1500, there must c) be one velocity as 0.
- d) set the value for acceleration and deceleration for Pr312 and Pr313

| [INTSPD1] | 【INTSPD2】 | Veloctiy value |
|-----------|-----------|----------------|
| OFF | OFF | Pr3.04 |
| ON | OFF | Pr3.05 |
| OFF | ON | Pr3.06 |
| ON | ON | Pr3.07 |

| Frame (mm) | Output power (W) | Type name | Rated Torque (N.M) | PeakTorque (N.M) |
|------------|------------------|----------------|--------------------|------------------|
| | 90 | ISV-B23090T-D4 | 0.3 | 0.8 |
| 57 | 130 | ISV-B23130T-D4 | 0.45 | 1.1 |
| | 180 | ISV-B23180T-D4 | 0.6 | 1.5 |

Chapter 6 Order information

Appendix

How to find the hidden parameter

The value of many parameters are forbidden to change , because usually the value has been set properly, however some parameters are needed to be checked or changed, for example , Pr715 need to be changed to match the motor type.

Here is the step to change the value of Pr020:

Run the software of ProTuner, we just find part of the parameter:

| I 🛒 🔤 🚳 | 营 📂 | | | | | | |

Trouble shooting

| Problem | Solution |
|--------------------------------|--|
| Motor don't run | ◇ If in position mode, : make sure pr408=8383, pr406=1200, pr407=E00; make sure voltage of input signal (pulse + direction) is between 5 - 24V. ◇ If in internal velocity mode : Make sure pr406 and pr407 are 8F** and 8E** ; Make sure pr304=0 Make sure pr408=8383 |
| ALM | Refer to chapter 4 for details |
| Factory setting can't be set | Change the value of Pr408 to 303. |
| The stiffness can't be changed | Check the status of SW3-SW5. |
